

STOP THOSE ROACHES!

The Sheriff's Clandestine Manual for Preparing Your Hideout

Important:

For best results, we recommend doing all the preparation steps. However, they are not mandatory. If you can't do them all due to time, personal situations, or disabilities, don't worry. Our treatment still works — it may just take a little longer to fully eliminate the colony.

Service includes: A 30 day warranty from the date of treatment

KITCHEN – Forbidden territory for roaches

- Take out **plates, glasses, utensils, and jars.**
- Store **all open food** in the fridge or **airtight bags.**
- **✗ No cereal left out in the open!**
- Whatever you remove, place it on the table and **cover it with a sheet** (top-secret operation style).
- **Take out the trash and paper bags.** No excuses.
- **Clean cabinets and corners.** Use a vacuum or brush — be a true **crumb detective**
- **Move the fridge and stove to sweep and clean behind them.**
That's where they **lay eggs and hide out.** Don't let any survive! 

BATHROOM – Grooming and espionage zone

- Empty **drawers and cabinets** (yes, even that lotion you never use).
- Store everything in **sealed bags**, like a **cosmetic smuggler.**
- Leave them in the **bathtub** — nobody looks there.
- **Keep the floor spotless**

BEDROOM – Watch out for hiding spots!

- **Empty the closet:** shoes, boxes, and stuffed conspirators out!
- **Pull out drawers** like you're escaping a raid.
- Build your **bunker on the bed** and cover it with a sheet (film noir style).

🌿 **OUTDOORS** – Don't let them hide outside!

- Remove **pet food and water bowls**.
- **Cut the grass** — this isn't a jungle.
- **Sweep up leaves, sticks, and anything** that looks like bug real estate.

✅ **MISSION CONCLUSIONS**—

- Leave the house for **4 hours** (pets included).
- ❌ **No mopping for the next 3 days.**
The treatment will **degrade if mopped** — only **broom sweeping** allowed.
- The **treatment works on floors and surfaces**, so let it do its job.
- 🐟 **Fish: cover the tank and turn off the pump** (aquatic stealth mode).
- 🍽️ **Clean and store all dishes.**
- 🐦🐸 **Birds and reptiles: must be relocated.**
(No feathered protests, please.)

Important Note from the Sheriff:

First treatment takes down 50% to 60% of the colony of roaches. So we have to wait for the rest of the roaches to get infected when they are exposed to treatment.

Depending on the infestation maybe you are going to need more treatments.

Thank you for joining this mission.
Sheriff Pest Control salutes you.
Out with the roaches!
